

## Investment Objective

The Growth Model aims to provide long term capital growth for investors who are willing to accept a higher level of risk by investing across global markets into a range of asset classes. Equity exposure within this portfolio will typically be between 80%-100%. The portfolio's benchmark is the ARC Sterling Equity Risk PCI.

## Commentary

Over the quarter, the Growth Model returned -9.01%, underperforming the ARC Sterling Equity Risk PCI. In the previous quarter, we stated that investors are grappling with both inflation and interest rate headwinds. They both continued to rise - very rapidly - in the 3 months since we last wrote. In fact, inflation now stands at 40-year highs and is showing no signs of abatement any time soon. Central Banks have a challenge on their hands with regards to how they handle interest rate policy to manage the inflation "genie". Market commentators continue to debate how the remainder of the year plays out with stagflation, reflation or slump some of the possible scenarios in the limelight. We do not believe it is wise to try and attach probabilities to any of these scenarios as getting these macroeconomic calls right would require a crystal ball, which currently remains undiscovered! Further, we possess no edge when it comes to forecasting these and even if we did know, there's no guarantee that this will result in enhanced decision-making. As each inflation print comes under intense scrutiny, we are likely to continue to face elevated levels of volatility. As always, our efforts will remain concentrated on building a robust portfolio that can preserve wealth and grow over the long term under a wide range of scenarios. We find the portfolio remains suitable for a client looking to obtain a broad exposure of assets diversified by manager, investment style, geography and income.

## Performance Summary as at 30th June 2022

	1 MONTH	3 MONTHS	6 MONTHS	1 YEAR	3 YEARS	5 YEARS	SINCE INCEPTION DATE
<b>Growth Model</b>	-5.69%	-9.01%	-14.83%	-10.60%	10.09%	22.22%	188.29%
<b>ARC Sterling Equity Risk PCI</b>	-5.00%	-8.21%	-12.74%	-8.92%	8.58%	20.12%	155.72%

A central model is created for each of our model portfolios, where the performance summary, asset allocation, fund holdings, charges and yield quoted on this factsheet are based on the central model portfolio. Where the central model is replicated, such as through a platform, any individual portfolio is unlikely to be identical to that of the central model as a result of the timing of the investment or any restrictions of the platform provider. There may be some circumstances when certain investments (e.g. property funds) may not be readily realisable and investors may experience difficulty in selling the investment or in obtaining reliable information as to its value.
