

## Investment Objective

The Balanced model aims to provide long term capital growth with some income for investors who are willing to accept a medium to high level of risk by investing across global markets into a range of asset classes. Equity exposure within this portfolio will not exceed 80%. The portfolio's benchmark is the ARC Sterling Steady Growth PCI.

## Commentary

Over the quarter, the DFM Balanced model returned 1.1%, outperforming the ARC Sterling Steady Growth PCI by 1.1%. 2023 has thrown up some unusual investment conditions and the third quarter continued the theme. Three months ago we highlighted the breadth of the market being incredibly narrow with large cap tech stocks being the driving force behind the strong market performance. During the quarter inflation (although falling) remains high, interest rates continued to rise and column inches referencing the word "recession" gathered pace. Although more than 50% of the indices (equity, bond, commodity) that we closely follow registered positive returns in the three months to 30 September, it is interesting to note that returns were more discriminate. For example, shorter-dated gilts (those with 5 years to maturity) delivered a positive return (approaching 3%), whereas gilts with a longer-dated maturity profile (more than 15 years) were near the bottom of the table with losses greater than 5%. The price of, and inflationary implications of Oil continues to dominate the headlines. In the third quarter, the oil price was up by almost a third and this will have knock-on effects for the global economy. Although trillions of dollars is earmarked to be invested in renewable energy projects for the next couple of decades, there is no escaping the fact that as a world we are still very reliant on oil (and will be for a long time to come). We find the portfolio remains suitable for a client looking to obtain a broad exposure of assets diversified by manager, investment style, geography and income.

## Performance Summary as at 30<sup>th</sup> September 2023

	1 MONTH	3 MONTHS	6 MONTHS	1 YEAR	3 YEARS	5 YEARS	SINCE INCEPTION DATE
Balanced Model	0.3%	1.1%	0.2%	7.9%	9.5%	13.5%	127.1%
ARC Sterling Steady Growth PCI	-0.8%	0.0%	0.1%	4.8%	8.3%	12.3%	100.1%

A central model is created for each of our model portfolios, where the performance summary, asset allocation, fund holdings, charges and yield quoted on this factsheet are based on the central model portfolio. Where the central model is replicated, such as through a platform, any individual portfolio is unlikely to be identical to that of the central model as a result of the timing of the investment or any restrictions of the platform provider. There may be some circumstances when certain investments (e.g. property funds) may not be readily realisable and investors may experience difficulty in selling the investment or in obtaining reliable information as to its value.
